Fund facts

Fund objective

The Fund's objective is to provide investors with capital growth over the long-term by investing in a diversified portfolio of global assets.

Investor profile

Investors seeking long-term capital growth from a diversified portfolio of global assets. The recommended investment horizon is 5 years or longer. Although the Fund's investment universe is global, units are priced in rands. Investors can therefore invest without having to personally expatriate rands.

Investment mandate

The Fund is a feeder fund and, other than assets in liquid form and currency contracts, invests only in one underlying fund - the M&G Global Balanced Fund, a US dollar denominated fund domiciled in Ireland. Through this underlying fund, the Fund has exposure to a diversified portfolio that may include equity and property securities, cash, bonds, currencies and commodities. The Fund may invest up to 75% in equity securities (excluding property) and up to 25% in property securities.

Fund commentary

Global equities and bonds posted broadly positive returns in April as positive investor sentiment outweighed growth concerns and lingering worries over US regional bank stability. Markets were bolstered by growing expectations that the US Federal Reserve would likely pause its aggressive rate hiking cycle after an expected 25bp increase in early May, as well as generally positive company earnings results. In the US, consumer prices increased by 5% y/y in March, slower than February's 6% y/y. US GDP growth slowed to an annual rate of 1.1% in Q1 2023, down from the annual rate of 2.6% recorded in Q4 2022. This data points to a slowing economy with increasing expectations that the US will enter a recession this year. In the UK, Q1 real GDP grew at a more-robust-than-expected 1.1% q/q, while CPI rose by 10.1% y/y in March 2023, down from 10.4% in February. Turning to the Eurozone, consumer prices are decreasing rapidly, but core prices remain stubbornly high. Market expectations are for at least a 25 basis point hike by the European Central Bank in May in continued efforts to drive down inflation. Official data released late-April indicated that the eurozone eked out just 0.1% GDP growth over Q1 2023, citing high inflation and interest rates as factors dampening economic output.

Against the backdrop of sticky inflation globally, the Chinese inflation dichotomy continues. China's consumer price index increased by only 0.7% y/y (an 18-month low) in March, below the 1% expectation. The People's Bank of China continues to cut interest rates and inject cash into the financial system to bolster economic growth. China's economic recovery continues in earnest, with GDP having grown by 4.5% in Q1 2023, exceeding expectations of 4%. China appears to be on track to achieve its 5% growth target for 2023. Japan's CPI rose 3.5% y/y in April, higher than the 3.2% reported in March. In Governor Kazuo Ueda's maiden monetary policy meeting, the committee left interest rates unchanged and continued with the central bank's ultra-loose monetary policy stance. Looking at global market returns for April (in US\$), the MSCI All Country World Index delivered 1.5%, the Bloomberg Global Aggregate Bond Index returned 0.4%, while the FTSE EPRA/NAREIT Global REIT Index posted 1.5%. The rand weakened 3.0% against the US dollar, and 4.7% against both the euro and pound sterling.

Rand weakness against the US dollar boosted returns in April. In US dollar terms, exposure to the Hungarian forint and hedging US dollar exposure into euros was beneficial, while among the fund's fixed income assets, exposures to the broader global fixed income market, emerging market government bonds and US Treasuries all added value. Within equities, losses from emerging markets in Asia, broad global equities and a short position in US equities outweighed gains from equities in Japan, the UK and Europe, and US financial stocks.

Glossary

12-month yield	A measure of the Fund's income distributions as a percentage of the Fund's net asset value (NAV). This is calculated by summing the income distributions over a rolling 12-month period, then dividing by the sum of the NAV at the end of the period and any capital gains distributed over the same period.
Annualised performance	The average amount of money (total return) earned by an investment each year over a given time period. For periods longer than one year, total returns are expressed as compounded average returns on a yearly basis.
Country exposure	The Fund's investment exposure to different countries as a percentage of the total fixed income assets held by the Fund.
Cumulative performance graph	This illustrates how an initial investment of R100 or N\$100 (for example) placed into the Fund would change over time, taking ongoing fees into account, with all distributions reinvested.
Income distribution	The dividend income and/or interest income that is generated by the underlying Fund investments and that is periodically declared and distributed to investors in the Fund after all annual service fees.
Information ratio	Measures the Fund's active return (Fund return in excess of the benchmark) divided by the amount of risk that the manager takes relative to the benchmark. The higher the information ratio, the higher the active return of the Fund, given the amount of risk taken and the more consistent the manager. This is calculated over a 3-year period.
Maximum drawdown	The largest drop in the Fund's cumulative total return from peak to trough over any period.
Monthly volatility (annualised)	Also known as standard deviation. This measures the amount of variation or difference in the monthly returns on an investment. The larger the annualised monthly volatility, the more the monthly returns are likely to vary from the average monthly return (i.e. the more volatile the investment).
Percentage of positive rolling 12 months	The percentage of months, since inception, that the Fund has shown a positive return over a rolling 12-month period.
Sharpe ratio	The Sharpe ratio is used to measure how well the return of an asset compensates the investor for the risk taken. The higher the Sharpe ratio the better the Fund's historical risk-adjusted performance has been. This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the standard deviation of the Fund's returns. This is calculated over a 3-year period.
Sortino ratio	This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the downside deviation of the Fund's returns i.e. the "bad" volatility. A high Sortino ratio indicates a low risk of large losses occurring in the Fund. This is calculated over a 3-year period.
Total Expense Ratio (TER)	This shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated for the year to the end of the most recent completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs.
Total Investment Charges (TIC)	The percentage of the value of the Fund incurred as costs, relating to the investment of the Fund. As fund returns are reported after deducting all fees and expenses, these costs (the TER and TIC) should not be deducted from the fund returns.
Transaction Costs (TC)	The percentage of the value of the Fund incurred as costs relating to the buying and selling of the Funds underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.
Unit class	M&G's Funds are offered in different unit classes to allow different types of investors (individuals and institutions) to invest in the same fund. Different investment minimums and fees apply to different unit classes. A Class: for individuals only. B & D Class: retirement funds and other large institutional investors only. X Class: the special fee class that was made available to investors that were invested in the Dividend Income Feeder Fund. T Class: for investors in tax-free unit trusts. F Class: for Discretionary Fund Managers.

⁴ If the income earned in the form of dividends and interest exceeds the total expenses, the Fund will make a distribution (cpu = cents per unit).

Disclaimer

MandG Investments Unit Trusts (South Africa) (RF) Ltd (Registration number: 1999/0524/06) is an approved CISA management company (#29). Assets are managed by MandG Investment Managers (Pty) Ltd, which is an approved discretionary Financial Services Provider (#45199). The Trustee/Custodian details are: Standard Bank of South Africa limited – Trustees Services & Investor Services, 20th Floor, Main Tower, Standard Bank Centre, Heerengracht, Cape Town.

Collective Investment Schemes (unit trusts) are generally medium-to long-term investments. Past performance is not necessarily a guide to future investment performance. Unit trust prices are calculated on a net asset value basis. This means the price is the total net market value of all assets of the unit trust fund divided by the total number of units of the fund. Any market movements – for example in share prices, bond prices, money market prices or currency fluctuations – relevant to the underlying assets of the fund may cause the value of the underlying assets to go up or down. As a result, the price of your units may go up or down. Unit trusts are traded at the ruling forward price of the day, meaning that transactions are processed during the day before you or the Manager know what the price at the end of the day will be. The price and therefore the number of units involved in the transaction are only known on the following day. The unit trust fund may borrow up to 10% of the fund value, and it may also lend any scrip (proof of ownership of an investment instrument) that it holds to earn additional income. A M&G unit trust fund may consist of different fund classes that are subject to different fees and charges. Where applicable, the Manager will pay your financial adviser an agreed standard ongoing adviser fee, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fees is available on our website. One can also obtain additional information on M&G products on the M&G website. The Fund may hold foreign securities including foreign CIS funds. As a result, the fund may face material risks. The volatility of the fund may be higher and the liquidity of the underlying securities may be restricted due to relative market sizes and market conditions. The fund's ability to settle securities and to repatriate investment income, capital or the proceeds of sales of securities may be adversely affected for multiple reasons including market conditions, macro-economic and political circumstances. Further, the return on the security may be affected (positively or negatively) by the difference in tax regimes between the domestic and foreign tax jurisdictions. The availability of market information and information on any underlying sub-funds may be delayed. The Manager may, at its discretion, close your chosen unit trust fund to new investors and additional investments by existing investors to make sure that it is managed in accordance with its mandate. It may also stop your existing debit order investment. The Manager makes no guarantees as to the capital invested in the fund or the returns of the fund. Excessive withdrawals from the fund may place the fund under liquidity pressure and, in certain circumstances, a process of ring fencing withdrawal instructions may be followed. Fund prices are published daily on the M&G website. These are also available upon request. The performance is calculated for the portfolio. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Purchase and repurchase requests must be received by the Manager by 13h30 (11h30 for the Money Market Fund) SA time each business day. All online purchase and repurchase transactions must be received by the Manager by 10h30 (for all Funds) SA time each business day.
