Risk profile

Fund facts

Fund objective

The Fund's objective is to provide investors with capital growth over the long-term by investing in a diversified portfolio of global equity securities.

Investor profile

Investors seeking long-term capital growth from global equity securities. The recommended investment horizon is 7 years or longer. Although the Fund's investment universe is global, units are priced in rands. Investors can therefore invest without having to personally expatriate rands.

Investment mandate

The Fund is a feeder fund and, other than assets in liquid form and currency contracts, invests only in one underlying fund – the M&G Global Equity Fund.
Quantitative analysis of individual companies, proprietary data analysis and machine learning are used to identify securities for potential inclusion by the fund managers. The Fund has exposure to a diversified portfolio that may include common stocks and shares, depository receipts, REITs, other collective investment schemes and financial derivative instruments.

Fund commentary

Global equities and bonds posted broadly positive returns in April as positive investor sentiment outweighed growth concerns and lingering worries over US regional bank stability. Markets were bolstered by growing expectations that the US Federal Reserve would likely pause its aggressive rate hiking cycle after an expected 25bp increase in early May, as well as generally positive company earnings results. In the US, consumer prices increased by 5% y/y in March, slower than February's 6% y/y. US GDP growth slowed to an annual rate of 1.1% in Q1 2023, down from the annual rate of 2.6% recorded in Q4 2022. This data points to a slowing economy with increasing expectations that the US will enter a recession this year. In the UK, Q1 real GDP grew at a more-robust-than-expected 1.1% q/q, while CPI rose by 10.1% y/y in March 2023, down from 10.4% in February. Turning to the Eurozone, consumer prices are decreasing rapidly, but core prices remain stubbornly high. Market expectations are for at least a 25 basis point hike by the European Central Bank in May in continued efforts to drive down inflation. Official data released late-April indicated that the eurozone eked out just 0.1% GDP growth over Q1 2023, citing high inflation and interest rates as factors dampening economic output.

Against the backdrop of sticky inflation globally, the Chinese inflation dichotomy continues. China's consumer price index increased by only 0.7% y/y (an 18-month low) in March, below the 1% expectation. The People's Bank of China continues to cut interest rates and inject cash into the financial system to bolster economic growth. China's economic recovery continues in earnest, with GDP having grown by 4.5% in Q1 2023, exceeding expectations of 4%. China appears to be on track to achieve its 5% growth target for 2023. Japan's CPI rose 3.5% y/y in April, higher than the 3.2% reported in March. In Governor Kazuo Ueda's maiden monetary policy meeting, the committee left interest rates unchanged and continued with the central bank's ultra-loose monetary policy stance. Looking at global equity market returns (in US\$), developed markets outperformed emerging markets in April, with the MSCI World Index returning 1.8% and the MSCI Emerging Markets Index -1.1%. Among developed markets, the S&P 500 returned 1.6%, while the Dow Jones Industrial Average delivered 2.6% and the technology-heavy Nasdaq Composite posted 0.1% (in US\$). The UK's FTSE 100 returned 5.1% and Japan's Nikkei 225 delivered 0.6% (in US\$). The rand weakened 3.0% against the US dollar, and 4.7% against both the euro and pound sterling.

A key attribute of portfolio construction within the fund is that active country, currency and industry exposures are constrained to ensure that style and idiosyncratic stock risk are the main drivers of active returns. The fund's style exposure proved to be a key detractor to performance in April, while stock selection had a muted effect. Over the long term, we expect stock selection to be the main driver of performance however, periodically, style can dominate as has been the case over the past couple of months. At the style level, the portfolio's active exposure to small size, high beta and low profitability companies were the biggest detractors to performance. Rand weakness against the US dollar boosted returns in April.

Glossary

| Glossary | |
|---|---|
| 12-month yield | A measure of the Fund's income distributions as a percentage of the Fund's net asset value (NAV). This is calculated by summing the income distributions over a rolling 12-month period, then dividing by the sum of the NAV at the end of the period and any capital gains distributed over the same period. |
| Annualised performance | The average amount of money (total return) earned by an investment each year over a given time period. For periods longer than one year, total returns are expressed as compounded average returns on a yearly basis. |
| Cumulative performance graph | This illustrates how an initial investment of R100 or N\$100 (for example) placed into the Fund would change over time, taking ongoing fees into account, with all distributions reinvested. |
| Income distribution | The dividend income and/or interest income that is generated by the underlying Fund investments and that is periodically declared and distributed to investors in the Fund after all annual service fees. |
| Information ratio | Measures the Fund's active return (Fund return in excess of the benchmark) divided by the amount of risk that the manager takes relative to the benchmark. The higher the information ratio, the higher the active return of the Fund, given the amount of risk taken and the more consistent the manager. This is calculated over a 3-year period. |
| Maximum drawdown | The largest drop in the Fund's cumulative total return from peak to trough over any period. |
| Monthly volatility (annualised) | Also known as standard deviation. This measures the amount of variation or difference in the monthly returns on an investment. The larger the annualised monthly volatility, the more the monthly returns are likely to vary from the average monthly return (i.e. the more volatile the investment). |
| Percentage of positive rolling 12 months | The percentage of months, since inception, that the Fund has shown a positive return over a rolling 12-month period. |
| Sharpe ratio | The Sharpe ratio is used to measure how well the return of an asset compensates the investor for the risk taken. The higher the Sharpe ratio the better the Fund's historical risk-adjusted performance has been. This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the standard deviation of the Fund's returns. This is calculated over a 3-year period. |
| Sortino ratio | This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the downside deviation of the Fund's returns i.e. the "bad" volatility. A high Sortino ratio indicates a low risk of large losses occurring in the Fund. This is calculated over a 3-year period. |
| Total Expense Ratio (TER) | This shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated for the year to the end of the most recent completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. |
| Total Investment Charges (TIC) | The percentage of the value of the Fund incurred as costs, relating to the investment of the Fund. As fund returns are reported after deducting all fees and expenses, these costs (the TER and TC) should not be deducted from the fund returns. |
| Transaction Costs (TC) | The percentage of the value of the Fund incurred as costs relating to the buying and selling of the Funds underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. |
| Unit class | M&G's Funds are offered in different unit classes to allow different types of investors (individuals and institutions) to invest in the same fund. Different investment minimums and fees apply to different unit classes. A Class: for individuals only. B & D Class: retirement funds and other large institutional investors only. X Class: the special fee class that was made available to investors that were invested in the Dividend Income Feeder Fund. T Class: for investors in tax-free unit trusts. F Class: for Discretionary Fund Managers. |

Disclaimer

MandG Investments Unit Trusts (South Africa) (RF) Ltd (Registration number: 1999/0524/06) is an approved CISCA management company (#29). Assets are managed by MandG Investment Managers (Pty) Ltd, which is an approved discretionary Financial Services Provider (#45199). The Trustee's/Custodian details are: Standard Bank of South Africa limited - Trustees Services & investor Services. 20th Floor, Main Tower, Standard Bank Centre, Heerengracht, Cape Town.

Collective Investment Schemes (unit trusts) are generally medium-to long-term investments. Past performance is not necessarily a guide to future investment performance. Unit trust prices are calculated on a net asset value basis. This means the price is the total net market value of all assets of the unit trust fund divided by the total number of units of the fund. Any market movements – for example in share prices, bond prices, money market prices or currency fluctuations – relevant to the underlying assets of the fund may cause the value of the underlying assets to go up or down. As a result, the price of your units may go up or down. Unit trusts are traded at the ruling forward price of the day, meaning that transactions are processed during the day before you or the Manager know what the price at the end of the day will be. The price and therefore the number of units involved in the transaction are only known on the following day. The unit trust fund may borrow up to 10% of the fund value, and it may also lend any scrip (proof of ownership of an investment instrument) that it holds to earn additional income. A M&G unit trust fund may consist of different fund classes that are subject to different fees and charges. Where applicable, the Manager will pay your financial adviser an agreed standard ongoing adviser fees, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fees, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fees, which is included in the overall costs of the fund. As a result, the fund may be higher and the liquidity of the fund may be higher and the liquidity of the fund may be higher and the liquidity of the fund may be higher and the liquidity of market information and information on M&G products on the M&G website. The Fund may be affected (positively or negatively) by the difference in tax regimes between the domestic and foreign tax juris

⁴ If the income earned in the form of dividends and interest exceeds the total expenses, the Fund will make a distribution (cpu = cents per unit).
